Chapter 1

Why

In 2011 I took a course. It was a course on biomechanics. During this course we had to come up with 3D visualizations of different models. As a final task we had to come up with a mechanic spider. My part was to make it move. I had never programmed a robot before.

[...] people don't buy what you do. people buy why you do it!

Chapter 2

What - Create a WebGL Spider

In this chapter we shall have a look at how to build on this example on your machine.

> !!! For those of you who are new to JSC please refer to the next section to install it.
